

Project Name: Recipe Management

App Name: Recipe

Objective:

Build a Django app where users can **create, read, update, and delete recipes**, with access control via **login/logout/register** functionality.

Authentication Features:

- User Registration
- Login
- Logout
- Only logged-in users can:
 - Add new books
 - Edit their uploaded books
 - Delete their uploaded books

Model: recipe

- name
- ingredients
- instructions
- Recipe Image
- creator
- description
- created at

Required Features:

- ❓ Use Django's built-in User model for authentication
- ❓ Admin panel to manage recipes
- ❓ CRUD Views:
 - Create Recipe

- List Recipes (public)
- View Single Recipe (public)
- Edit & Delete (for owner only)
- Use Bootstrap cards to display recipes
- Add a thumbnail-style card design to display each Recipe
